

NORTHLANE SOFTWARE INC.

IT HELPDESK & TECHNICAL SUPPORT FREQUENTLY ASKED QUESTIONS

Document ID	POL-E2-2026
Effective Date	January 15, 2026
Document Owner	Sam Okafor, Director of Security & IT Governance
Approved By	Priya Nathan (VP of Engineering)
Classification	Internal / Employee Information

1.0 GENERAL IT SUPPORT & TICKETING PROCEDURE

Q1.1: How do I submit an IT helpdesk request?

All technical issues, access requests, hardware provisioning inquiries, and software licensing needs must be submitted via the internal ticketing platform at helpdesk.northlane.internal or by sending a message to the **#it-helpdesk** channel on Slack. Urgent production outage incidents should be reported directly via Slack command `/incident-alert` to reach on-call IT infrastructure personnel immediately.

Q1.2: What are standard IT support operating hours?

Standard helpdesk coverage operates Monday through Friday from 8:00 AM to 6:00 PM Central Time (CT). Emergency production incident support for enterprise infrastructure, customer-facing pipelines, and security remediation operates on a 24/7 basis under the direction of Sam Okafor, Director of Security.

2.0 IDENTITY MANAGEMENT, OKTA & ACCESS CONTROL

Q2.1: How do I reset my account password or Okta Multi-Factor Authentication (MFA)?

Northlane enforces centralized Single Sign-On (SSO) via Okta. To reset your primary domain password, visit the self-service portal at sso.northlane.com. If you have lost access to your secondary MFA device (Okta Verify / hardware security token), submit a ticket with identity confirmation approved by your direct supervisor. IT personnel will never request your password or authentication codes via email or message.

Q2.2: How do I request access to production databases or AWS engineering resources?

Access to production data environments, AWS engineering infrastructure, and internal dashboard administration for Northlane Insights requires formal Role-Based Access Control (RBAC) authorization. Requests must be submitted through the Access Management Portal with explicit written sign-off from your department lead and final approval from Priya Nathan, VP of Engineering, or Sam Okafor, Director of Security.

3.0 HARDWARE PROVISIONING & SECURITY STANDARDS

Q3.1: What hardware is provisioned for new employees?

All full-time staff receive a standard corporate MacBook Pro (or Dell XPS workstation for specified engineering roles), pre-configured with Jamf mobile device management (MDM), mandatory FileVault disk encryption, CrowdStrike endpoint protection, and corporate VPN profiles. Hardware refresh cycles occur every 36 months.

Q3.2: May I install personal software on my company laptop?

Company devices are restricted to pre-approved software available via the Jamf Self-Service Application Catalog. Installation of unverified third-party software, browser extensions with elevated permissions, or personal file-sharing utilities is strictly prohibited under corporate security compliance standards.
